frazersimpson.co.uk

QUALITY IS AT THE HEART OF EVERYTHING WE DO.

Frazer Simpson is a supplier of Bespoke Windows and Doors, Partitions and Glass Doors, Architectural Stone, Bricks and GRP products.

From our initial beginnings concentrating on our windows and external doors, we have expanded our offering to be able to deliver a complete start-to-finish service to help you work more efficiently and shorten your supply chain when working on construction and building developments.

We take pride in our established reputation and customer care. Striving to build close working relationships, that last.

Our experienced personnel work closely with architects, designers, contractors, developers, engineers and planners to ensure the materials specified are of the highest quality. Complimented by our supply only or where applicable, supply and fit service options.

Good communication is key. We'll liaise with you or your project site to ensure accurate call-off times and arrange just-in-time deliveries to reduce site stocking and waste. Whatever the project size or location you can rely on us to provide the right products, at the right specifications and at the right time.

Bespoke products, exceptional service. We are Frazer Simpson.

- **Established reputation**
- **Over 20 years experience**
- **'Just in time' delivery**

Our environment

We work closely with our manufacturing partners to ensure we deliver to the highest standard every time. Where possible, we strive to ensure that all materials and products are sourced responsibly, from renewable sources for minimum impact to the environment.

WINDOWS & DOORS	4
PARTITIONS & GLASS DOORS	12
ARCHITECTURAL STONE & BRICKS	16
GRP PRODUCTS	26

Traditional & Contemporary **WINDOWS**

We offer a range of high-quality windows from traditional styling to modern contemporary, available in standard and made-to-measure sizes. Our windows come with significant guarantees and can be supplied in Timber, Aluminium, Ali-clad, Steel and UPVC.

Our extensive choice of finishes and ironmongery fittings will complement and enhance any style of building project or development.

Glazing

Our windows can be supplied with single, double or triple-glazed options and we offer a great choice of patterned, decorative and designer glass inlays. We can also offer acoustic glazing that helps to absorb sound, energy and prevent vibration travelling through the glass and also vacuum glass which can give you an exceptional low u-value.

Our commitment to quality

Our windows are available with a full SBD certification and PAS24 Testing if required. Frazer Simpson and all our installers carry full SMAS accreditation alongside CERTASS.

- Full-take off from architects drawings/schedules
- In-house service engineers
- Supply or supply and fit options
- Full commission service on fitting
- Standard and bespoke sizing available
- PAS24 and SBD Tested products are available

Supply & fit service available

**Timber
Aluminium
Alu-Clad
Steel
& UPVC**

Traditional & Contemporary **WINDOWS**

Timber Windows

We are renowned for our exemplary customer service, delivering quality timber windows at competitive prices.

We offer a comprehensive selection of standard and bespoke wooden windows. Our extensive capabilities ensure we can supply a range of styles including fixed, casement, tilt and turn, flush sash and sliding sash.

Our team of timber window specialists work hard to create bespoke solutions, providing a range of soft and hardwood products with many customisation options. Our modern production facilities, technical resources for scheduling and take-offs, logistical and distribution systems ensure that we can supply both stock and bespoke timber window frames for a variety of applications.

Aluminium Windows

We supply a wide range of Aluminium window profiles. Typically, they will have a design life of up to 30 years.

Aluminium also has a high strength-to-weight ratio, making them more resilient and less susceptible to accidental damage. Available in all popular frame styles. Fixed, tilt & turn, flush sash and bay.

Alu-Clad Windows

Alu-Clad windows are highly durable, low-maintenance, versatile solution for domestic and commercial applications.

With Alu-Clad, the added layer of protection and finish allows windows to withstand even the most severe conditions and easily adds another 10 years to their life expectancy.

The combination of superior craftsmanship, thermal performance and long-term durability make Alu-Clad windows ideal for modern new builds or refurbishments with a focus on energy efficiency. With a solid timber frame and Aluminium cladding externally, our windows deliver a beautiful look inside that only timber can.

Steel Windows

We offer exceptional architectural steel glazing solutions that are meticulously designed to transform any project into something truly extraordinary. Whether undertaking a new build, restoration, extension, or a straightforward replacement, we offer a vast range to suit every style.

Within this comprehensive range, every product is designed and built specifically for each customer and handcrafted by a skilled craftsman to your exact specifications.

Steel is most known for its strength and security and have the ability to last a considerable amount of time.

A selection of hardware is available in a vast range of different finishes to suit any home.

UPVC Windows

We supply a wide range of UPVC windows available in all popular frame styles. Fixed, casement, tilt & turn, flush sash, sliding sash, bay and vertical sliding.

The robust and resilient build of UPVC windows makes them exceptionally durable against tensile stress and wind impacts while their ability to resist corrosion, and temperature variations make them long-lasting.

UPVC Windows are a low-maintenance, long-lasting and secure choice for developers. When equipped with advanced multi-locking systems, UPVC windows also provide enhanced security against forced entry.

Cavity Closers & Window Formers

We supply cavity closers to suit all makes and types of doors and windows suitable for brick and block, timber frame, Metsec or any other build type.

We offer a bespoke service, designed to meet unique specifications from architect design to site approval, with samples supplied.

Cavity closers can be manufactured as 2, 3 or 4-sided frames supplied with or without vented heads, as circles, arches, ovals, mosque or as T or P-shaped flags.

Innovative designs & solutions that will delight customers now, and for the years to come.

Contact us today to discuss your requirements.

Entrance & External

DOORS

**Timber
Aluminium
Composite
& Steel**

We offer a diverse range of carefully selected high-quality entrance and external doors. Our range of styles complements a broad spectrum of properties from new builds to renovation projects.

We supply a selection of standard sizes and undertake bespoke manufacturing in Composite, Timber, Aluminium and external Fire Safety Doors.

Bespoke designs

We have an established reputation for working with interior designers, premium property developers and individual clients creating bespoke doors to specific design requirements.

Quality and the environment

We work closely with our suppliers to ensure we can deliver to the highest standard every time. Our suppliers ensure that all materials within the construction are sourced responsibly, where possible, from renewable sources for minimum impact on the environment.

Peace of mind

We supply fire-rated, tested and certified doors - FD30 (up to 30min fire resistance).

For those areas of your home or office that need extra peace and quiet we also supply acoustic screen systems.

- Full-take off from architects drawings/schedules
- In-house service engineers
- Supply or supply and fit options
- Full commission service on fitting
- Standard and bespoke sizing is available

Supply & fit service available

Entrance & External **DOORS**

Timber Doors

We supply external timber doors in a range of styles that are suitable for any type of residential development or refurbishing project.

Thanks to the versatility of timber, almost any design can be achieved. Classic in style yet varied in finish, a beautiful timber door will create a stunning finishing touch.

We can produce external doors with glass, including stained, bevelled and leadlight.

Composite Doors

Composite doors are made from a combination of materials including PVC, timber and laminated door skin. Doors are built with a highly weatherproof and durable acrylic layer.

The materials that make up a composite door are combined in ultra-modern computer-controlled production facilities and bonded under high-pressure conditions. This results in an external door that will outperform other styles.

Composite doors are designed to appear like a traditional wooden door, comprised of an outer frame, subframe and a solid timber core, delivering premium quality standards. Due to the materials used, they are more durable, weather resistant and thermally efficient.

Fire Doors

Our complete range of UK manufactured fire doors are designed to perform, combining great looks with durability, security and fire resistance. All of our ranges, from composite fire doors to our handcrafted timber and steel fire doors, meet relevant building and fire safety regulations.

Bi-fold, Sliding, Hinged & French Doors

Folding and sliding doors help you to create an open, flexible and modern space for both living and working environments, and available in timber or aluminium.

Choose your exact requirements for your folding sliding doors to create beautiful panoramic views and a relaxed open ambient living environment.

Panels can be used in any configuration, style and design. Bi-fold, sliding, hinged and French door configurations are available in both open-in and open-out options. Doors can be manufactured to replace entire walls to maximise your opening space.

Louvre Doors

We have a wide range of natural air intake grilles for both new buildings and refurbishment projects. This offers a variety of different options and can be custom-built to adjust to any measurement.

All louvres are water resistant with a penetration-proof option available, and if looking for sound absorption an option for acoustic louvre blades is available.

Aluminium & Steel Security Doors

All our aluminium doors are available in 3 ranges- Hinged, Concealed Hinge and Pivot, all with a choice of specifications and finishes. Whether traditional or of a more modern design, they will make any entrance to a home special.

When it comes to home design, aluminium is the symbolic material of contemporary architecture, available in a full range of powder-coated colours, looks and finishes. No matter what the shape or dimension of your doors and whether traditional or a contemporary pivot door, it can be tailored to the most challenging specifications.

Our custom-designed steel security doors are crafted from a galvanized steel core and frame to deliver unmatched style, durability, and protection.

These doors can be customized to any design and finished in any RAL colour, including a gloss option, to meet even the most demanding specifications. Security glazing is available in various finishes, positioned on the side, top, or within the door.

Key Features:

- Customizable design for both interior and exterior
- Available in single, double, and pivot door configurations
- Optional biometric system with fingerprint access
- Standard and bespoke ironmongery options
- All doors are certified to current UK standards

Handcrafted by highly skilled craftsmen to your exact specifications.

Contact us today to discuss your requirements.

PARTITIONS & GLASS DOORS

**Steel &
Aluminium**

Create new spaces with our range of handmade steel partitions and internal glass doors. Beautifully designed slim framework will maximise natural light, whilst offering a seamless division to modernise your interior.

Whether exterior or internal, our exceptional steel-look architectural glazing solutions are meticulously designed to transform a living space into something truly extraordinary.

Bespoke designs

From our iconic exterior steel replica range, to our stunning interior partitions and glass doors, and our versatile Bi-Folding door range, we can offer a unique solution to suit your project. Every product in the range is designed and built specifically for each individual customer, handcrafted by skilled craftsmen to your exact specifications.

Quality and the environment

Our interior partitions and glass doors will enhance any home and are available in an extensive selection of colour and finish options, including a stunning range of traditional and contemporary furniture and ironmongery styles and designs. For those who want something truly special, we offer metal finishes — stunning screens finished in antique bronze, smooth copper, or even brushed brass.

Peace of mind

Our steel doors and screen systems are fire-rated, tested and certified - FD30 (up to 30min fire resistance). For those areas of your home or office that need extra peace and quiet we also supply acoustic screen systems.

Supply & fit service available

Natural, Wet Cast, Semi-Dry Cast & GRC

ARCHITECTURAL STONE

Frazer Simpson offers a complete design, supply, and installation service for a wide range of architectural façade options including natural and reconstituted masonry, precast concrete, GRC, lightweight stone and brick slip systems.

Our technicians, engineers and skilled installers provide a comprehensive service that encapsulates material selection, optimisation of performance criteria, design and warranty of support and fixing systems, compliance with building and warranty provider requirements. We also provide a fully tested and certified façade option, provision of fully detailed CAD component and layout drawings, and installation by our regional teams of specialist, highly skilled installers and masons.

Having successfully completed many large and prestigious projects throughout the UK, Frazer Simpson places great emphasis on quality, service and the health and safety of our operatives and site personnel is paramount in our continued expansion in the often complex, demanding, diverse and fast-paced sector of the construction industry.

- Tested and certified facade options
- Design, supply and installation options
- Highly skilled installers and masons

Supply & fit service available

**Natural Stone
Wet Cast
Semi-Dry Cast
GRC**

Natural, Wet Cast, Semi-Dry Cast & GRC ARCHITECTURAL STONE

Natural Stone

Whilst there are many products in today's market that replicate stone, nothing can match the timeless beauty of the indigenous material. Natural stone has and always will have a character of its own which cannot be truly reproduced by man-made alternatives.

Combining the latest computer-aided design technology with state-of-the-art cutting and profiling equipment, Frazer Simpson are major importer of French and Portuguese limestones and work closely with highly skilled stonemasons to create elegant and exquisite projects throughout the United Kingdom. Replicating closely in colour and texture to natural stone.

Wet Cast

With considerably higher mix designed strengths and significant differences in casting techniques, wet cast components can be used in an infinite number of applications such as domestic housing projects, commercial and retail developments, hard landscaping and civil engineering schemes.

Unlike semi-dry cast products which tend to be non-structural, wet cast units can be reinforced and can be produced in much larger load-bearing units which in turn can often reduce site installation times and associated costs. Wet cast is often chosen for its strength, durability and optimal design performance characteristics.

Nothing quite captures the imagination like the unmistakable quality & luxury of natural stone.

Semi-Dry Cast GRC

Replicating closely in colour and texture to natural stone, semi-dry cast products can be cost-effectively incorporated into a broad spectrum of design criteria.

Select from our competitively priced range of standard products to more complex profiles and components to enhance and compliment any given project.

The addition of semi-dry cast dressings, not only adds character and distinction, but also considerable perceived additional value to any property. Available in a range of six standard colours, semi-dry cast products provide all the beauty of natural stone without the prohibited costs thereby enabling the incorporation of architectural dressings without compromise. Using only the finest materials, all products are hand-finished to reproduce the timeless elegance of natural stone.

Glass-reinforced concrete utilises the latest manufacturing technology to produce an innovative alternative to traditional cast stone.

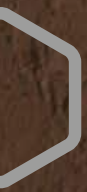

Due to its very high tensile and flexural strength, the material can be manufactured in much thinner sections without compromise, thereby offering weight savings of up to 80%. This solution addresses issues of weight saving both on the loading of structures and manual handling requirements faced by many builders in today's health and safety-conscious environment.

Having a surface texture similar to that of natural stone, GRC products can not only be used on new build developments but can also, in many cases be successfully installed retrospectively.

The use of GRC can also significantly reduce the need for expensive masonry support systems required for precast and natural stone products.

Versatility is a key advantage in the selection of GRC where products can be supplied for any number of uses such as architectural cladding, high-level cornice and architraves, as well as more traditional heads, cills and copings to door and window surrounds.

BRICKS

**Facing
Linear
Reclaimed
Engineered
Specials
Engraved
Brick Slips
Arches**

As part of the Brickability Group, we are allied with the largest brick supplier in the UK, with long-standing client and manufacture partnerships throughout the UK and Europe.

This means we have access to a huge variety of materials in various colours, textures and sizes, at the most competitive and cost-effective prices.

Comprehensive sales technical support

Our experienced sales personnel work closely with clients, architects, contractors, developers, engineers and planners to ensure the materials specified are of the highest quality, cost-effective and delivered on time.

The right product, at the right time.

BRICKS

Facing

Clay-facing bricks have been the building material of choice for thousands of years and although construction methods have changed, bricks continue to be one of the most sustainable, cost-effective and aesthetically pleasing cladding solutions available. Bricks — being highly fire and impact-resistant — are also one of the most durable and secure building materials.

We harbour a wealth of experience and offer thorough technical support, as well as a brick-matching service. When you are renovating, installing an extension or constructing an entirely new building, we can locate bricks which exactly match your needs.

Linear

Linear bricks — also known as Roman bricks — give buildings a unique look of scale and individuality. They are available in various sizes (up to 440mm long), in numerous textures and colours. Linear bricks were once a very widely used building material, but they fell out of favour when mass production and the standardisation of bricks became prominent. However, the use of linear bricks is once again becoming increasingly popular as consumers are looking for some product diversity and Linear bricks offer a dramatically different look from standard-size bricks.

Reclaimed

We supply reclaimed bricks from any number of demolished buildings, meaning we always have a stock of well-weathered bricks. Not only can these reclaimed bricks help new projects seamlessly fit in with their surroundings, but they are environmentally friendly too, adding virtually nothing to the carbon footprint of your building project.

We can also provide newly manufactured reclaimed bricks, deliberately designed to look old.

Engineered

We supply engineering bricks which are denser and stronger than most facing bricks. Engineering bricks are ideal for use where strength and low levels of water absorption are essential, such as within retaining walls, foundations and grounds works.

Specials

Special-shaped bricks are manufactured from standard bricks, using a cut and bonded method. This process is carried out using diamond-tipped blades and clean, fresh water.

The bonding process takes place using a two-part epoxy resin, specifically developed for this task.

Special-shaped bricks can be delivered back to site in days rather than weeks.

Engraved

We offer a broad range of engraved bricks; a novel and permanent way of fundraising, paying tribute or marking a particular event with your building. The lettering and/or design of engraved bricks can be filled with colour to make them more striking.

Whether placed on the ground or on a wall, you can be assured that your commemorative message will be long-lasting and effective.

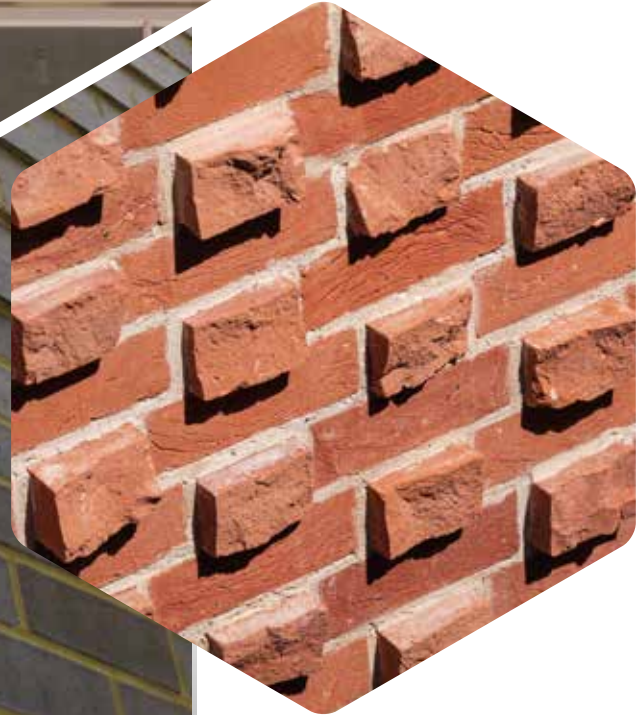

Contact us today to discuss your requirements.

Brick Slips

The system is an alternative to fitting individual brick slips one by one. A pre-populated carrier with mesh fused into the brick slip that can be used for application internally or externally. As well as the increased speed from the traditional single brick slip the Monolith system can provide an alternative construction method to the traditional cavity wall. The system has no cavity requirements and can be directly applied to insulation, external leaves and render boards alike, therefore reducing the build-up by up to 3 times than traditional build.

Arches

There are 3 methods of manufacturing brick arches:

Loose Cut

These arches are cut into individual voussoirs (Arch bricks). The arch is shrinkwrapped to a board ready for site installation by the bricklayer. The arch is designed to support its own weight therefore a catnic lintel is required above the opening to support the arch and the weight above.

Pre-Formed (Lightweight)

These arches are cut into 22mm brick slips and then bonded to an 80mm lightweight backing block, to achieve a 102.5mm soffit. The arch is again designed to support its own weight therefore a catnic lintel is required beneath the arch to carry the weight above.

Pre-Formed (Heavyweight)

These arches are cut into 25mm brick slips which are bonded to a load-bearing concrete lintel. As they are load bearing the customer has no requirement for an external skin lintel as they can continue to build on top of the arch. This method also allows for the arch to be seen from beneath with a 102mm Brick-Faced Soffit if your window is set back from the brickwork.

Methods 2 & 3 need to be pre-pointed, by site, before installation, to ensure the concrete mix is consistent throughout the development. Alternatively, give your arches a traditional look and ask us to pre-point them with lime effect 4mm Joints. We also supply red rubber bricks ideal for refurbishment and conservation projects.

GRP PRODUCTS

GRP Dormers

GRP has fast become one of the most popular methods of manufacture for dormers. Our GRP dormer window surrounds have been designed to meet with modern-day requirements of offsite fabrication. We will liaise with the site to ensure accurate call-off times and just-in-time deliveries to reduce site stocking and waste.

GRP dormer windows can easily be fixed to roof trusses prior to roof covering. The advantage of using GRP dormers other than conventional building methods is mainly time saved when installing with GRP units, this allows you to close off open roof spaces quickly.

GRP Canopies

We offer entrance canopies and porch canopies for doors and bay window roofs. GRP canopies are available in a range of sizes and are delivered as complete units including all fixings and

installation instructions. Installing a GRP entrance canopy is a stylish and cost-effective feature for both refurbishment and new-build projects.

All our canopies come with the options of kneelers or gallows brackets, just let us know which best suits your build and we would be happy to accommodate. We can also provide a Canopy Fixing Kit should it be required for an exact match.

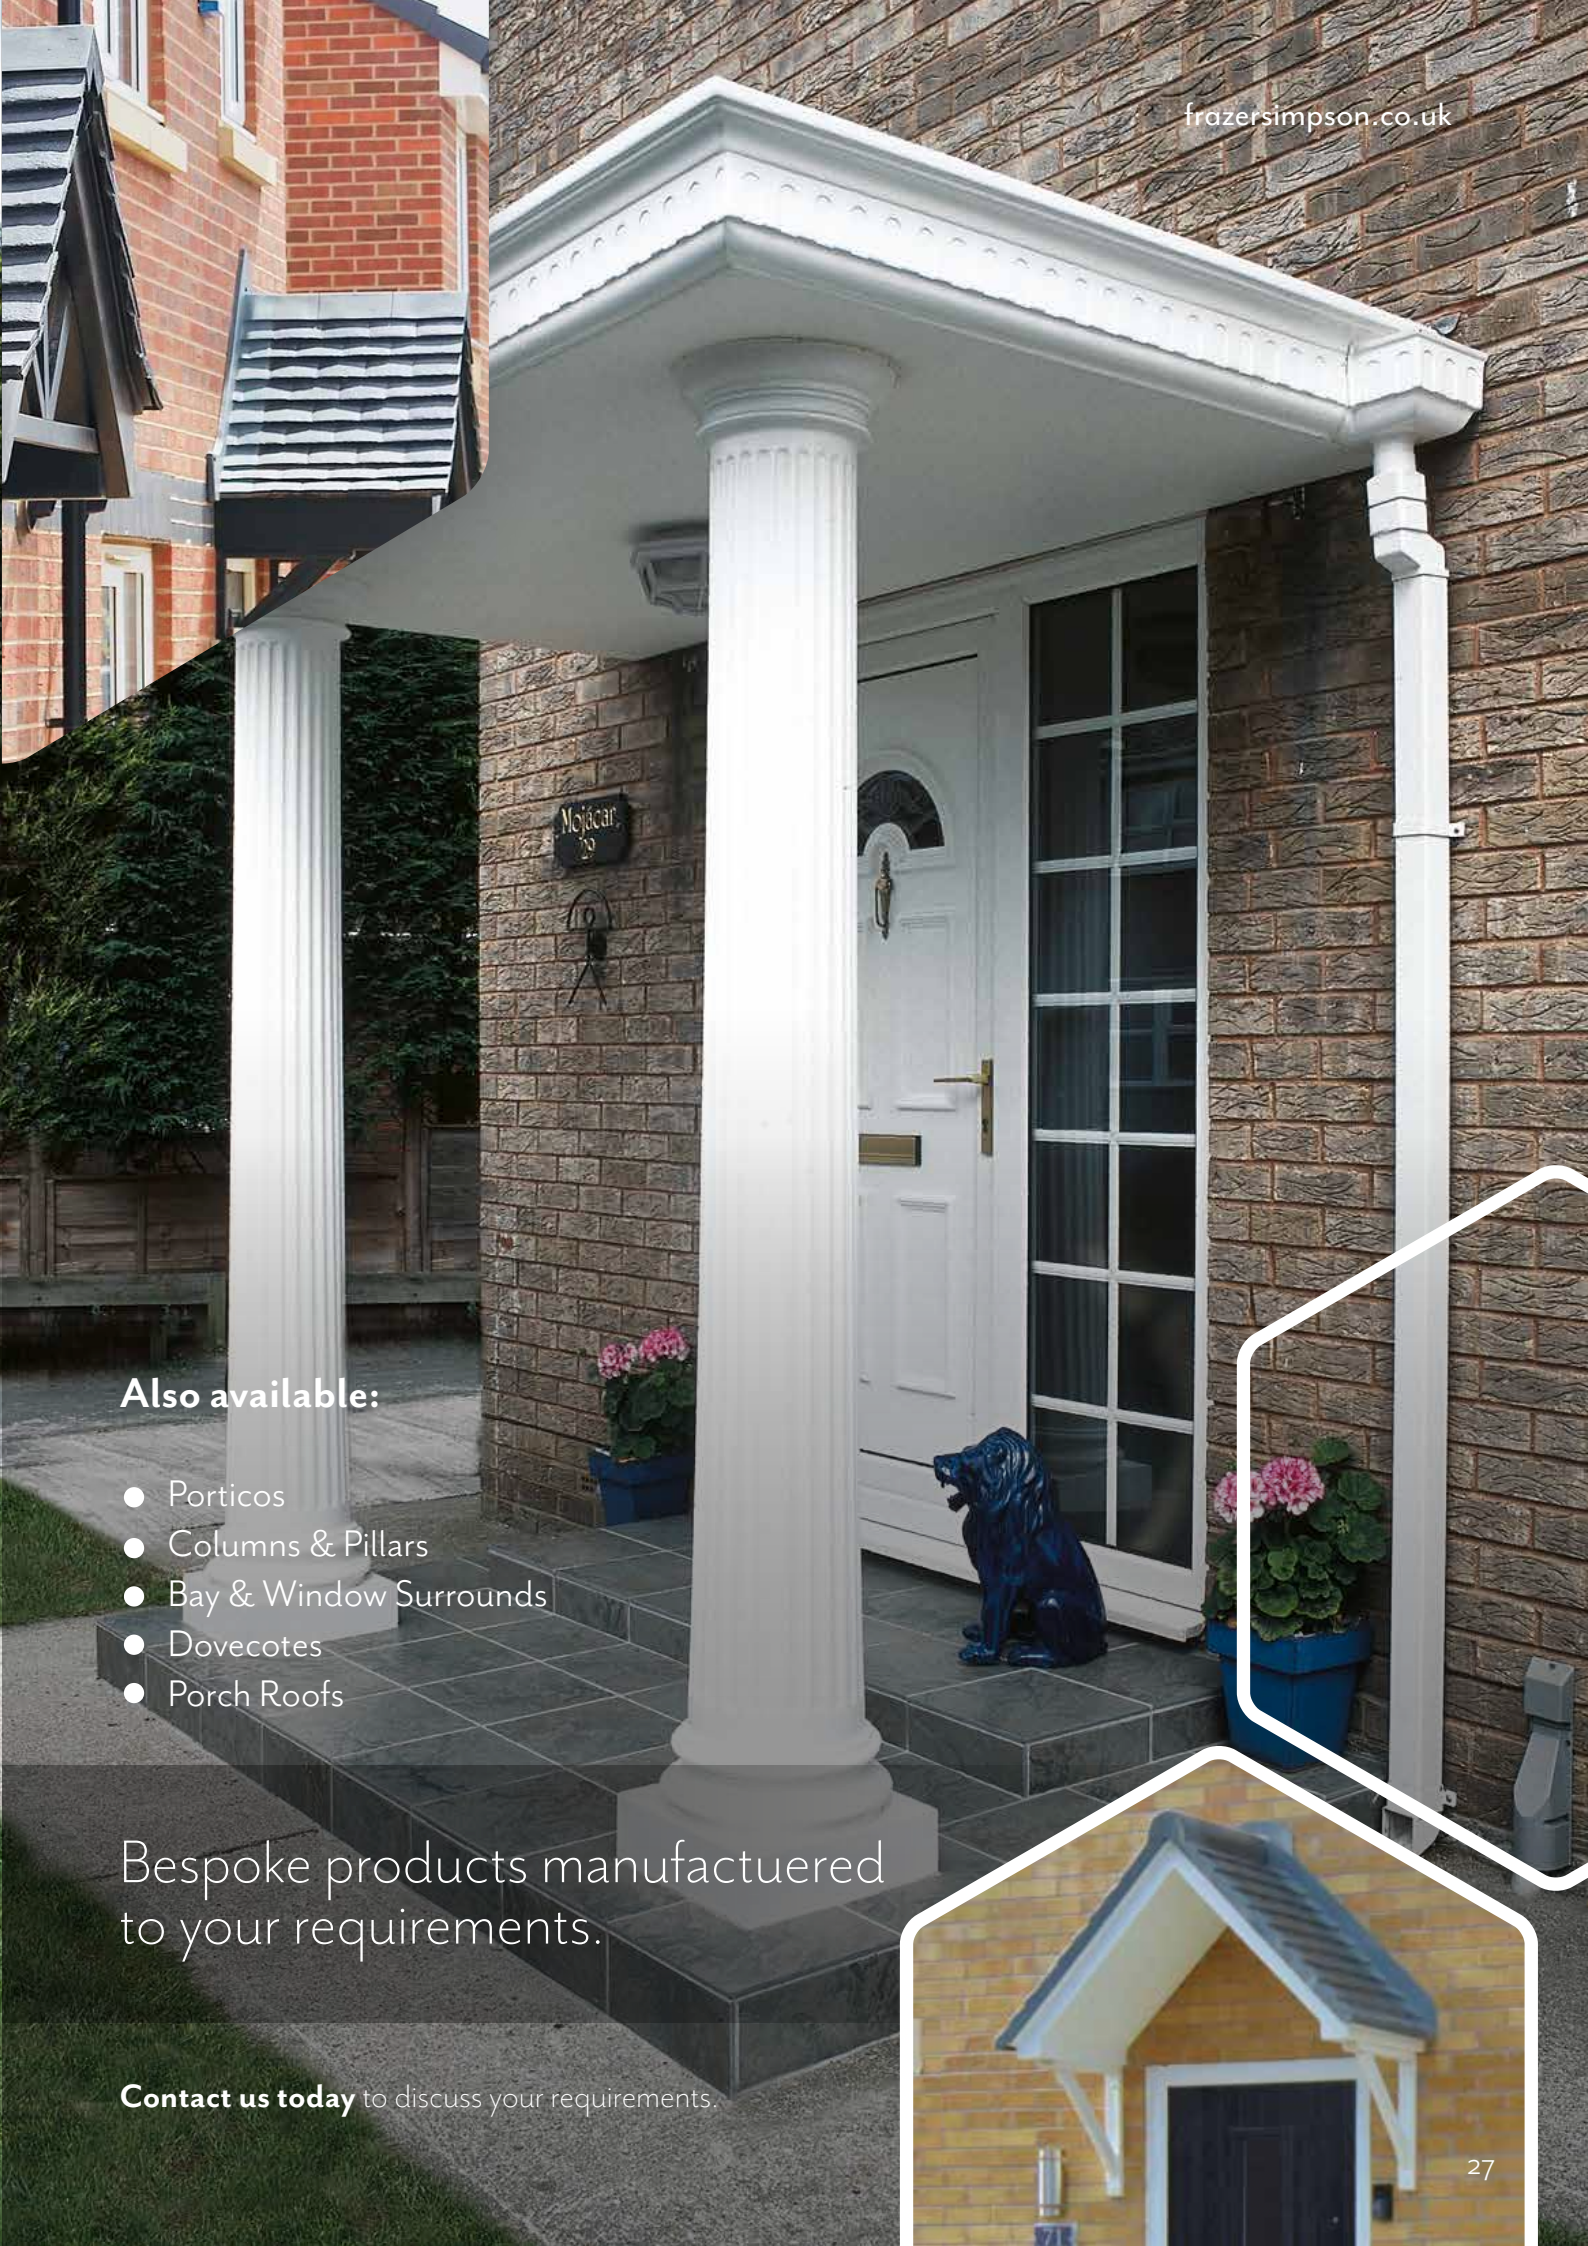

GRP Brick Effect Chimneys

We offer a range of GRP brick and rendered effect chimneys to provide a lightweight, cost-effective and simple way to add a chimney to a new or existing property.

GRP chimneys are manufactured utilising the latest GRP technology to provide a product that is both stunning in its visual appearance and accuracy for replicating brick types. All brick colours and textures can be replicated and samples of the actual brick are taken from site or pre-ordered to ensure an exact match.

- Quality build products
- 3D approval drawings
- Reduced onsite construction times

Also available:

- Porticos
- Columns & Pillars
